

AQUA-TEKNIK A/S

WATER TREATMENT

FISHERIES- AND MARINE MUSEUM

Aqua-Teknik has serviced the Museum since 1989, and in connection with renovation and reconstruction of the salt water aquarium and sealarium, Aqua-Teknik was acting as design and build contractor for the water treatment.

Today the Marine Museum has an energy saving and operational safe, high technology water treatment installation. The surveillance and the control of the water treatment runs in a special developed CMS-device.

The physical frames of the Museum required a special designed installation, involving development and manufacturing of key components in special dimensions.

Salt water intake from the North Sea has been established.
