

AQUA-TEKNIK A/S

WATER TREATMENT

STATOIL

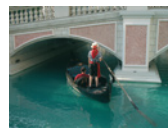

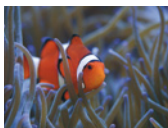

The sculpture named “Energy and power”, at the headquarter of Statoil, Copenhagen, is an example of using water and light as an integrated part of art work. Created by the artist Anders Nyborg.

Aqua-Teknik has designed and installed the complete water treatment system, as well as the special designed water dust system.

Underwater light is an area in which Aqua-Teknik has great knowledge. The 28 tons of granite and stainless steel are lightened up in blue.

Focus on maintenance. Automatic measuring and dosing system, to maintain water quality, means minimum of operation and maintenance.
